Models for Neural Spike Computation and Cognition David H. Staelin, Carl H. Staelin
This monograph addresses the intertwined mathematical, neurological, and cognitive mysteries of the brain. It first evaluates the mathematical performance limits of simple spiking neuron models that both learn and later recognize complex spike excitation patterns in less than one second without using training signals unique to each pattern. Simulations validate these models, while theoretical expressions validate their simpler performance parameters. These single-neuron models are then qualitatively related to the training and performance of multi-layer neural networks that may have significant feedback. The advantages of feedback are then qualitatively explained and related to a model for cognition. This model is then compared to observed mild hallucinations that arguably include accelerated time-reversed video memories. The learning mechanism for these binary threshold-firing "cognon" neurons is spike-timing-dependent plasticity (STDP) that depends only on whether the spike excitation pattern presented to a given single "learning-ready" neuron within a period of milliseconds causes that neuron to fire or "spike". The "false-alarm" probability that a trained neuron will fire for a random unlearned pattern can be made almost arbitrarily low by reducing the number of patterns learned by each neuron. Models that use and that do not use spike timing within patterns are evaluated. A Shannon mutual information metric (recoverable bits/neuron) is derived for binary neuron models that are characterized only by their probability of learning a random input excitation pattern presented to that neuron during learning readiness, and by their false-alarm probability for random unlearned patterns. Based on simulations, the upper bounds to recoverable information are ~0.1 bits per neuron for optimized neuron parameters and training. This information metric assumes that: 1) each neural spike indicates only that the responsible neuron input excitation pattern (a pattern lasts less than the time between consecutive patterns, say 30 milliseconds) had probably been seen earlier while that neuron was "learning ready", and 2) information is stored in the binary synapse strengths. This focus on recallable learned information differs from most prior metrics such as pattern classification performance and metrics relying on pattern-specific training signals other than the normal input spikes. This metric also shows that neuron models can recall useful Shannon information only if their probability of firing randomly is lowered between learning and recall. Also discussed are: 1) how rich feedback might permit improved noise immunity, learning and recognition of pattern sequences, compression of data, associative or content-addressable memory, and development of communications links through white matter, 2) extensions of cognon models that use spike timing, dendrite compartments, and new learning mechanisms in addition to spike timing- dependent plasticity (STDP), 3) simulations that show how simple optimized neuron models can have optimum numbers of binary synapses in the range between 200 and 10,000, depending on neural parameters, and 4) simulation results for parameters like the average bits/spike, bits/neuron/second, maximum number of learnable patterns, optimum ratios between the strengths of weak and strong synapses, and probabilities of false alarms.

From reader reviews:

William Svendsen:

Why don't make it to be your habit? Right now, try to prepare your time to do the important act, like looking for your favorite guide and reading a book. Beside you can solve your long lasting problem; you can add your knowledge by the publication entitled Models for Neural Spike Computation and Cognition. Try to make the book Models for Neural Spike Computation and Cognition as your friend. It means that it can being your friend when you experience alone and beside regarding course make you smarter than previously. Yeah, it is very fortuned for you. The book makes you a lot more confidence because you can know almost everything by the book. So , let's make new experience as well as knowledge with this book.

Monica Philson:

Reading a e-book can be one of a lot of pastime that everyone in the world likes. Do you like reading book therefore. There are a lot of reasons why people enjoy it. First reading a book will give you a lot of new data. When you read a reserve you will get new information since book is one of various ways to share the information or their idea. Second, reading through a book will make an individual more imaginative. When you examining a book especially fiction book the author will bring that you imagine the story how the characters do it anything. Third, you can share your knowledge to some others. When you read this Models for Neural Spike Computation and Cognition, it is possible to tells your family, friends along with soon about yours e-book. Your knowledge can inspire the others, make them reading a reserve.

Randy Jones:

People live in this new day of lifestyle always try and and must have the spare time or they will get lot of stress from both daily life and work. So , if we ask do people have time, we will say absolutely of course. People is human not really a huge robot. Then we inquire again, what kind of activity are there when the spare time coming to you actually of course your answer may unlimited right. Then do you try this one, reading ebooks. It can be your alternative in spending your spare time, the book you have read is usually Models for Neural Spike Computation and Cognition.

Rosa Milliken:

Models for Neural Spike Computation and Cognition can be one of your beginning books that are good idea. We all recommend that straight away because this publication has good vocabulary that could increase your knowledge in language, easy to understand, bit entertaining but nonetheless delivering the information. The article writer giving his/her effort to set every word into joy arrangement in writing Models for Neural Spike Computation and Cognition nevertheless doesn't forget the main level, giving the reader the hottest and based confirm resource data that maybe you can be among it. This great information may drawn you into new stage of crucial pondering.

Download and Read Online Models for Neural Spike Computation and Cognition David H. Staelin, Carl H. Staelin #2E4BITGPJ0Y

Read Models for Neural Spike Computation and Cognition by David H. Staelin, Carl H. Staelin for online ebook

Models for Neural Spike Computation and Cognition by David H. Staelin, Carl H. Staelin Free PDF d0wnl0ad, audio books, books to read, good books to read, cheap books, good books, online books, books online, book reviews epub, read books online, books to read online, online library, greatbooks to read, PDF best books to read, top books to read Models for Neural Spike Computation and Cognition by David H. Staelin, Carl H. Staelin books to read online.

Online Models for Neural Spike Computation and Cognition by David H. Staelin, Carl H. Staelin ebook PDF download

Models for Neural Spike Computation and Cognition by David H. Staelin, Carl H. Staelin Doc
