## **Sustainable Industrialization** David Wallace

This text outlines a new model of industrial organization and its evolution. It aims to overturn conventional assumptions about the relationship between industrial and developing countries. By drawing together disparate strands of knowledge about historical patterns of industrial development and dominance, the role of firms in creating and disseminating eco-efficient practices and the inevitable dominance of private direct investment over official aid in developing countries, it argues that developing countries have an opportunity to use environmentally sustainable development as an organizing principle for creating productive economies which may outperform the most efficient economies of the West.
