Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology)

Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology)

A growing proportion of the world's population is dependent on **Seawater Desalination** as a source of fresh water for both potable and civil use. One of the main drawbacks of conventional desalination technologies is the substantial energy requirement, which is facing cost increases in the global energy market. "**Seawater Desalination**" presents an overview of conventional and non-conventional technologies, with a particular focus on the coupling of renewable energies with desalination processes.

The first section of this book presents, in a technical but reader-friendly way, an overview of currently-used desalination processes, from thermal to membrane processes, highlighting the relevant technical features, advantages and disadvantages, and development potential. It also gives a rapid insight into the economic aspects of fresh water production from seawater.

The second section of the book presents novel processes which use **Renewable Energies** for fresh water production. From the first solar still evaporators, which artificially reproduced the natural cycle of water, technology has progressed to develop complex systems to harness energy from the sun, wind, tides, waves, etc. and then to use this energy to power conventional or novel desalination processes. Most of these processes are still at a preliminary stage of development, but some are already being cited as examples in remote areas, where they are proving to be valuable in solving the problems of water scarcity.

A rapid growth in these technologies is foreseen in the coming years. This book provides a unique foundation, within the context of present and future sustainability, for professionals, technicians, managers, and private and public institutions operating in the area of fresh water supply.

From reader reviews:

Randal Revilla:

Do you considered one of people who can't read enjoyable if the sentence chained from the straightway, hold on guys this specific aren't like that. This Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) book is readable by means of you who hate the perfect word style. You will find the details here are arrange for enjoyable reading experience without leaving perhaps decrease the knowledge that want to give to you. The writer involving Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) content conveys prospect easily to understand by many people. The printed and e-book are not different in the articles but it just different by means of it. So , do you nonetheless thinking Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) is not loveable to be your top checklist reading book?

Phillip Herzog:

Reading a publication tends to be new life style on this era globalization. With reading through you can get a lot of information that may give you benefit in your life. Having book everyone in this world can share their idea. Publications can also inspire a lot of people. Plenty of author can inspire their particular reader with their story or even their experience. Not only the storyline that share in the guides. But also they write about the information about something that you need instance. How to get the good score toefl, or how to teach your kids, there are many kinds of book which exist now. The authors on earth always try to improve their skill in writing, they also doing some investigation before they write for their book. One of them is this Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology).

Corinne Schlegel:

Do you like reading a guide? Confuse to looking for your best book? Or your book ended up being rare? Why so many issue for the book? But any people feel that they enjoy regarding reading. Some people likes reading, not only science book and also novel and Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) or maybe others sources were given know-how for you. After you know how the truly great a book, you feel want to read more and more. Science book was created for teacher or maybe students especially. Those ebooks are helping them to add their knowledge. In other case, beside science publication, any other book likes Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology) to make your spare time much more colorful. Many types of book like here.

Henry Buford:

What is your hobby? Have you heard this question when you got learners? We believe that that issue was given by teacher on their students. Many kinds of hobby, Every individual has different hobby. Therefore you know that little person such as reading or as examining become their hobby. You need to understand that

reading is very important as well as book as to be the point. Book is important thing to provide you knowledge, except your current teacher or lecturer. You will find good news or update with regards to something by book. Amount types of books that can you decide to try be your object. One of them are these claims Seawater Desalination: Conventional and Renewable Energy Processes (Green Energy and Technology).
